

I automated my entire video pipeline with Claude Code

3 skills. No editing software. No timeline.

swipe for the exact pipeline →

I just tell it what I want — cut clips, add captions, mix audio, all through conversation.

20,000+

GitHub stars · built by the browser-use team

```
> ln -sf video-use ~/.claude/skills/video-use
```

 STEP 2
HyperFrames

I write plain HTML, and it renders real motion graphics, frame by frame, deterministic every time.

40,000+

GitHub stars · used in production at tldraw & TanStack

```
> npx skills add heygen-com/hyperframes
```

STEP 3

Remotion Skill

I describe the video I want in plain English, and it writes the actual code behind it.

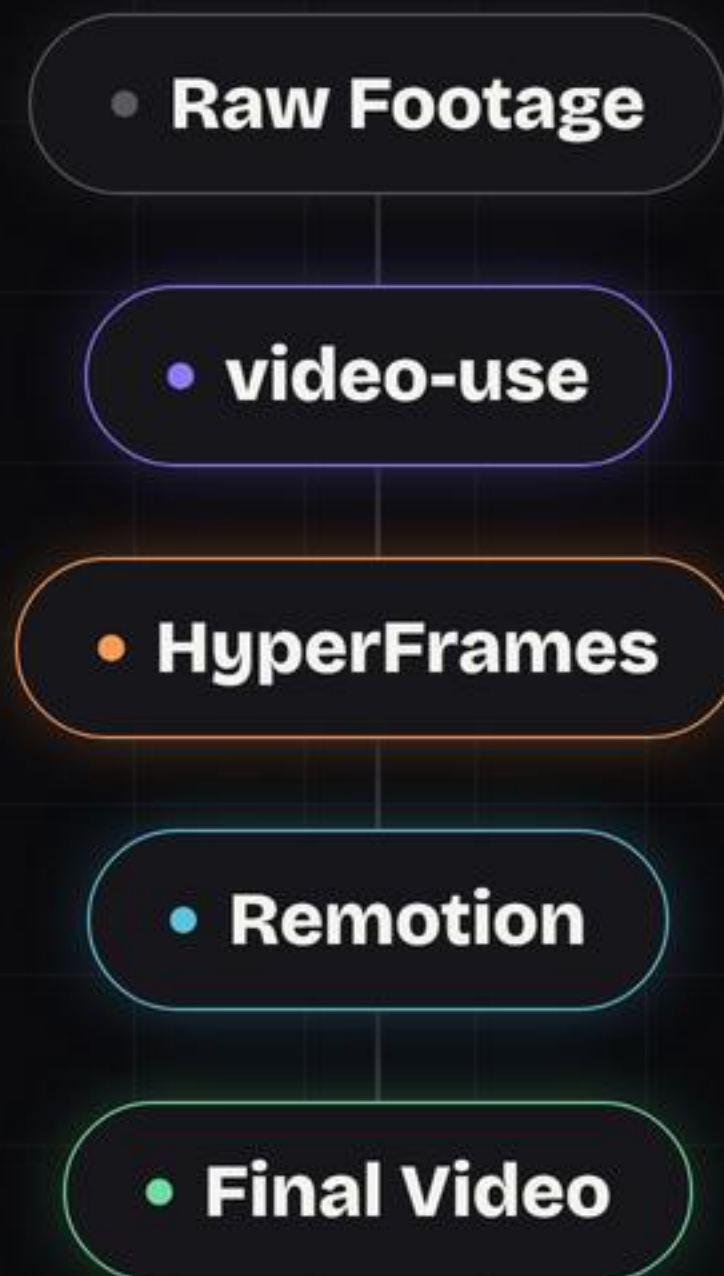

6M views

on its own launch demo, in 48 hours

```
> npx skills add remotion-dev/skills
```

The full pipeline

Comment EDIT

and I'll send you my exact pipeline — all three links.
